

CASE STUDY

State-wide Financial Services Provider

K7 protects the digital infrastructure that enables value-added financial credit operations

The State-wide Financial Services Provider is part of a group operating for over a 100 years. Just one cyberattack could destroy their reputation, which is why they rely on K7 to secure their digital infrastructure across hundreds of branches.

Client Snapshot

- » Part of a group founded in 1921
- » 900 branches
- » 900+ employees
- » 1,200 endpoints

The client provides state-wide financial services through devices powered by modest hardware across widely distributed operations. Any of its hundreds of branches could serve as the point of entry for a cyberattack. The client leverages K7's low-impact protection and centralised management to maintain uninterrupted operations across the region.

Securing Infrastructure that Supports Retail Credit Services

The Client's Requirements

- World-class protection
- Efficient endpoint security
- G Suite compatibility
- Scalability for future expansion
- Endpoint control across all branches

Why The Client Chose K7

International award-winning protection

Low-impact endpoint security

Easy G Suite segmentation

Scalability without instability

Centralised management

The K7 Solution

The client identified K7 Endpoint Security (K7 EPS) as the perfect solution for their requirements, based on an extensive Proof of Concept (POC) process that verified the K7 solution's protection, efficiency, and features.

International Award-winning Protection

The client was keen to ensure that the endpoint security solution provided best-in-class protection. The many awards that **K7 has received from testing agencies**, including AV-Comparatives (Austria), AV-TEST (Germany), and Virus Bulletin (United Kingdom), and the Real-Time Threat List (RTTL) Contributor of the Year award from the Anti-Malware Testing Standards Organization received by K7 Labs, convinced the client that K7 provided superior protection against the latest cyberthreats.

Low-impact Protection

The client's IT team were concerned that endpoint security would impair the performance of branch devices, many of which were powered by modest hardware. K7 EPS utilises the legendary K7 scan engine which has repeatedly been tested and verified as the world leader in efficiency, protecting computing devices without slowing them down. The client confirmed the efficiency of K7's protection in real-world conditions by installing K7 EPS on the devices used in some of their branches during their POC evaluation.

Easy G Suite Segmentation

The client extensively utilises G Suite/Google Workspace to harness the power of the cloud and boost productivity. The client's IT team wished to obtain a solution that provided a quick and easy way to permit G Suite access while blocking personal Google accounts. They were delighted that K7 EPS included built-in domain-linked G Suite Segmentation that prevented access to Google services linked to personal accounts and blocked access to G Suite implementations linked to other domains, ensuring cybersafe utilisation of G Suite across the organisation.

Scalability Without Instability

The client's team needed an endpoint security solution that would not hinder their current as well as future technology infrastructure. They were satisfied that K7 would support their expansion strategy and technology roadmap as the K7 EPS console is known to remain stable even when the number of managed endpoints significantly increases.

Centralised Management

The client was aware that having 900 branches created a large attack surface for threat actors to target, and required an endpoint security solution that would enable the implementation of a consistent endpoint security policy across the organisation. They were impressed by the centralised management features in K7 EPS which provided organisation-wide endpoint security control through an intuitive console and allowed quick changes to security settings across the enterprise.

K7 Security's **Endpoint Security** delivers comprehensive multi-layered protection that can secure widely distributed facilities and any scale of operations. **Contact Us** to learn more about our security solutions that are trusted by businesses operating in BFSI and other security-sensitive industries.
