

CASE STUDY

Technology and Outsourcing Firm

K7 secures the IT
infrastructure that serves
Fortune 500 clients

The Technology and Outsourcing Firm requires world class protection to preserve the trust that it has built with its clients. K7 provides internationally recognised cybersecurity that has been proven both in test labs and in the field across the world.

Client Snapshot

- » 300 endpoints
- » Fortune 500 clients
- » First Indian ISO 9001 certified SME software firm

The Technology and Outsourcing Firm is a pioneer in the Retirement and Pension Plan Administration sector, providing both technology solutions and operations outsourcing services. A single cyberattack could be detrimental to the reputation that they have carefully built over the years with the world's most demanding clients.

Cybersecurity Engineered for the Enterprise

The Client's Requirements

- Advanced cyberthreat protection including protection against zero-day and memory injection attacks
- Quick deployment
- Hassle-free migration from existing cybersecurity solution

The K7 Solution

K7 Security's Endpoint Security (K7 EPS) is engineered to provide the protection that the security-focused enterprise needs and avoids cumbersome installation procedures to enable hassle-free migration.

Behaviour-Based Protection

The client conducted an IT audit which revealed that their existing cybersecurity solution did not protect against zero-day and memory injection attacks. In addition to conventional signature-based protection, K7 EPS includes behaviour-based protection that utilises heuristic detection to monitor potentially suspicious processes. Behaviour-based protection guards against zero-day attacks and other unknown/obfuscated threats and blocks malware that attempts to inject itself into a system process. The client's team evaluated K7 EPS along with solutions from other well known cybersecurity providers and identified K7 EPS as the only solution that provided the level of protection they required to satisfy the audit.

Rapid Deployment

K7 EPS has been designed to support rapid deployment across the enterprise through

- Single, combined console and web server installation with a small installation package that installs quickly with no integration issues
- Small endpoint installer size with single installation package for both 32 bit and 64 bit operating systems that enables quick download
- Endpoint installer can be customised to include the relevant group/policy for the end user to avoid post-installation configuration

K7 Security's specialists worked closely with the client's IT team to deploy the cybersecurity solution across the organisation in just 10 days.

Existing Solution Removal Assistance

Migrating from one cybersecurity solution to another can be problematic if the existing solution is not completely removed. Manual uninstallation of the existing solution across hundreds of endpoints is a daunting and time- and energy- consuming exercise. K7 provided an uninstallation tool that enabled quick removal of the existing cybersecurity solution, slashing the IT effort required to complete the migration.

Why The Client Chose K7

- Award-winning cyberthreat protection against malware, malicious websites, and social engineering attacks
- Rapid enterprise-wide deployment
- Removal tool for existing cybersecurity solution

K7 Security's Endpoint Security provides the Technology and Outsourcing Firm with superior multi-layered cyberthreat protection while avoiding the effort and disruption of a painful migration process.
