

K7 CLOUD ENDPOINT SECURITY

DATA SHEET

Protect Anytime, Anywhere

Digital transformation which has been radically occurring in all aspects. Technology driven business changed the way of interaction with their customers and product development process. Mutually when organization transforms, security and protection of their data should be an integral part.

Days are gone where security is way better just by configuring network preferences and activating firewall. As digital world changes, the way of protecting our data and securing our network has been changed enormously. With digital transformation, Cybercriminals are simultaneously growing by creating efficient threats and risk averse mode of operation.

K7 Cloud Endpoint Security

Simple Centered Cloud management solution

Unsecured Network results in:

- ✚ Leaks of confidential information
- ✚ Intruders can easily hack into the network
- ✚ Low performance of system
- ✚ Malicious files like viruses, Trojan, bot, adware's, rootkits can affect the system files

K7 cloud endpoint security provides the best security solution for small to medium business's where no dedicated system and infrastructure is needed to secure your network.

With a simple cloud based console, it's very easy to run, setup and configure the secured network. Remote management is also available where IT team can manage and monitor the entire network from anywhere just with internet enable browser.

Creating customized policies, assigning to created groups, generating report and remote scan can be done with hands on easy and simple steps.

Features

Monitor from Anywhere

With cloud based console, monitoring and management your network from anywhere. Creating groups, creating customized policy, fetching in detail individual system information from the network, monitoring scheduled task and generating report. All it possible from anywhere just with interned based browser. Protecting your business has never been easier. Protect every PC, within and outside office.

Quick Endpoint Installer

No more following the guide for some complicated steps to install Endpoints in your network. Just with one click installer, Endpoint installation has never been this easy and simple before. By centralized cloud based console, Endpoints can be managed effectively.

Intuitive Dashboard

An intuitive dashboard which provides you entire all-inclusive information about your network devices. Quick summary view of threats detected, blocked website, hardware violations and vulnerability detected. Provides you quick view on device status and OS distribution. Overall it gives entire secured status and allows you to take action when really needed.

No Dedicated Machine

Eliminate all the worries about additional infrastructure, datacenters and dedicated machine to setup secured network. Since all functions can be managed from single cloud based console and no need to setup any standalone management console to manage and monitor your network. Just by enroll with us and start protecting your network with no infrastructure cost.

Remote Scan

We provide you to schedule various type of scan like Quick Scan, Complete scan, Rootkit Scan and vulnerability scan through remote. From cloud based console you can scan any endpoint device from your networks and take action accordingly. Even better we provide you to track cookies, update client and track any changes on hardware remotely.

Anywhere Generate Report

History of data is always important which will help to analyze the data information. We provide generating reports of Detected threats, Hardware violation, Blocked website, Scan task, Vulnerability detected and Hardware asset of your networks. From cloud based console generating reports is possible from anywhere with any time range.
